DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Species II. in the reply filed on August 24, 2005 is acknowledged. The traversal is on the ground(s) that "the only differences between Species I and II is in the structure of the flame element" This is not found persuasive because it is precisely those differences that make them two patentably distinct species.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 29-36 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on August 24, 2005.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 28 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. This claim appears to have been intended to be a dependent claim (see, e.g., the reference to "said at least one light source"), but it does not refer to a previous claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3611

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Hess (2002/0023376).

Hess discloses a flame simulating assembly having at least one light source 14; a screen 52 having a front surface and positioned in a path of light from the light source, the screen being adapted to transmit an image of flames through the front surface; a simulated interior fireplace wall positioned behind the screen 52 (see, e.g., Fig. 1); the front surface of the screen, being transparent, comprises at least one observation region, the observation region being adapted to permit observation of at least part of the simulated interior fireplace wall.

Regarding claim 2, any arbitrary segment of the screen 52 can be considered a “viewing region” through which an image of flames is transmitted.

Regarding claim 4, glass is partially reflective, depending upon the angle at which one views it.

Regarding claim 5, any arbitrary segment of screen 52 can be considered a “transition region.”

Allowable Subject Matter

7. Claims 6-27 and 37-41 are allowed.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
